ANTI WRINKLE

Lines & wrinkles show character but as we age, these expression lines become deeper and more pronounced. Muscle relaxing therapy, or anti-wrinkle injections, is a popular and effective solution for dynamic facial wrinkles. While some lines are part of the normal process, certain areas prone to creasing—such as crow's feet, forehead and frown lines, can make the face appear much older than it is and can even affect expressions, making an individual look constantly tired, sad or unhappy looking.
